

Water wheel post. Roll tight.

Foot Bridge

Chimney

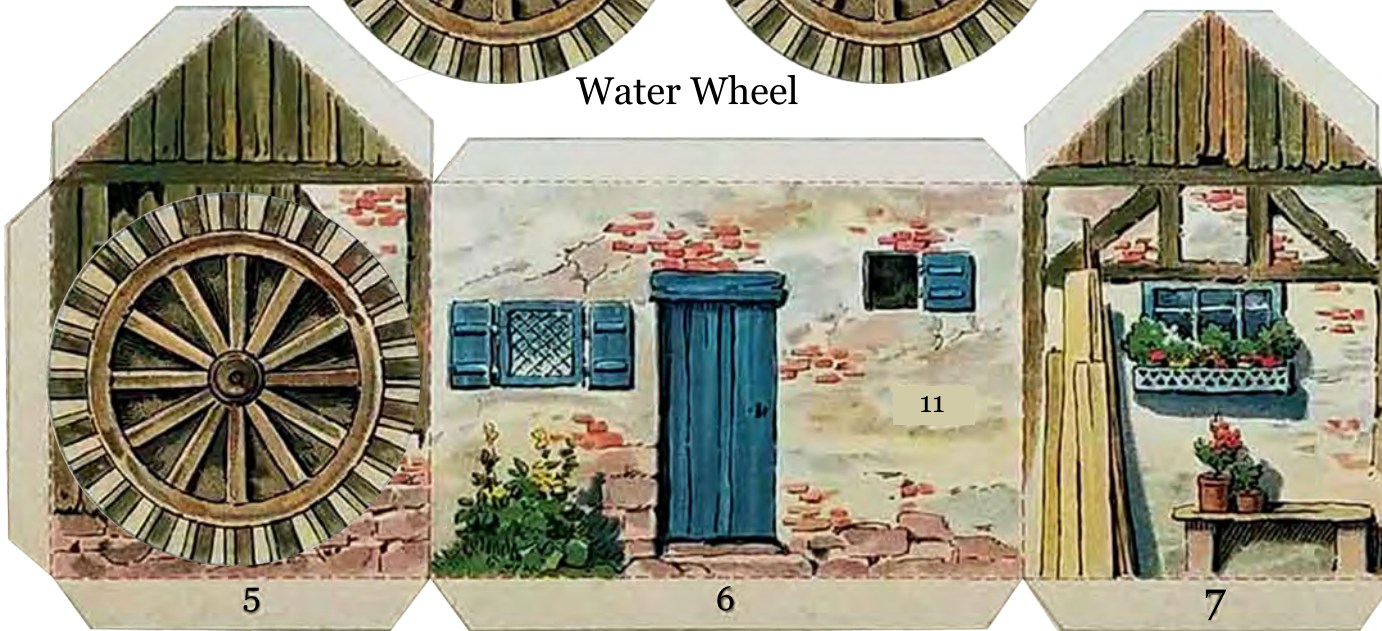

Instructions are found on the next page.

Mill Stone

Water Wheel

## **Assembly of Mill House:**

1. Fold tabs 1 and 2 under the foot bridge and glue to the points 1 and 2 designated on the house platform.
2. Take main house piece and fold all tabs, house corners, fold roof down middle line and fold roof edge against house.
3. Glue side tab to opposite wall (inside). This forms the house rectangular shape.
4. Glue roof to tabs.
5. Take chimney and glue side tab.
6. Fold chimney tabs 9 and 10 inward and glue to roof points 9 and 10.
7. Roll water wheel post as tight as you can and glue it so it doesn't unfurl.
8. Glue the two water wheels back-to-back. Then glue the post to the center back of the loose water wheel.
9. Once post glue is dry, glue post to flat water wheel on house side.
10. Fold down the tab on mill stone and place glue to gray side of tab. Glue to spot 11 on front of house. Place it so that the stone looks propped against the wall.
11. Glue the house by it's base tabs as designated. Tabs should be under the house.
